

TELEHEALTH INFORMED CONSENT

Effective Date: _____

This Telehealth Informed Consent governs participation in Viction-affiliated telehealth programs.

Telehealth services may include video consultations, audio consultations, secure messaging, laboratory ordering support, biomarker review, wellness consultations, optimization consultations, peptide monitoring programs, and follow-up care where applicable.

Users acknowledge telehealth services may involve limitations including technical failures, incomplete information, delayed communication, or the need for in-person evaluation.

PERFORMANCE BIOMARKER PROGRAM

The Performance Biomarker Program is intended primarily for wellness awareness, performance optimization, recovery optimization, educational review of biomarkers, and consumer wellness engagement.

Optimization-focused biomarker ranges may differ from disease-focused clinical ranges and are intended primarily for wellness and educational purposes.

PEPTIDE MANAGEMENT & MONITORING PROGRAM

The Peptide Management & Monitoring Program is a separate telehealth service that may involve prescription management, laboratory monitoring, provider oversight, follow-up consultations, and wellness-focused therapeutic support.

Prescription eligibility is determined solely by licensed healthcare providers and availability varies by state.

Users acknowledge that peptide-related programs may involve risks, side effects, laboratory monitoring requirements, and state-specific prescribing limitations.

Users understand that Viction's optimization services do not replace primary care, emergency care, or specialist medical evaluation.

Certain states may require additional telehealth disclosures, prescribing requirements, informed consent acknowledgments, or audio-video verification prior to treatment authorization.
